

BALTIC[®]

ELEMENT2

OUR JOURNEY SO FAR

1977

In Gothenburg, sailor and entrepreneur Per Frode begins selling sailing wear and accessories. His passion for life at sea soon takes shape as Baltic Safety Products AB, a company dedicated to safety, freedom, and craftsmanship on the water

1990 - 1999

Exports continue to grow, and a subsidiary is established in Hamble, Southampton, connecting Baltic's Swedish heritage with new markets and sailors abroad.

2010 - 2019

The decade marked a period of stability, laying a solid foundation for Baltic's future. At the turn of the century, founder Per Frode passed the helm, and in 2019, JCE in Gothenburg took ownership, carrying Baltic's values and vision forward for generations to come.

1980 - 1989

Baltic pioneers inflatable lifejackets and begins exporting to the Nordic countries and the UK. To meet growing demand, production starts at the sewing factory in Älgårås, where the headquarters soon move. The site has since expanded six times, a symbol of Baltic's steady growth and enduring commitment.

2000 - 2009

Baltic launches its first industrial product line and becomes the trusted partner of the Swedish Sea Rescue Society (SSRS), supplying lifejackets and buoyancy aids to those who dedicate their lives to saving others at sea.

2020 - 2025

Baltic launches Athena, the first inflatable lifejacket designed specifically for women. Soon after, the Environmental Initiative introduces the next generation of sustainable lifejackets and buoyancy aids, proving that responsibility and innovation go hand in hand.

BE A PART OF OUR NEXT DESTINATION

For us it all started in 1977, in Älgårås, Sweden, with a true ambition and dedication to improve the safety of those who find themselves on or near water and saving lives. This mission has made us one of the largest manufacturers of lifejackets and buoyancy aids in Europe and through steady growth we are now represented in over 50 countries. Älgårås and Sweden is still our home but we keep on growing.

In June we welcomed Martin Netinder as our new CEO, and together we will set sail to future destinations. As a crew, we have high ambitions but we will never lose our core and mission, and we welcome you to join us while we develop Baltic for future destinations. Shortly we will tell you more about our journey, but you can expect various partner activations and initiatives to enhance sell-through. Our campaign plan for 2026 is one simple step forward. Welcome onboard!

THE **2026 SEASON** MARKS BALTIC'S NEXT STEP

WELCOME TO THE FEEL OF COMFORTABLE SAFETY

Almost fifty years ago, Baltic set out with a simple mission: to save lives on the water. From the start, we knew safety alone wasn't enough. People wanted comfort. They wanted a fit that felt right. And they wanted gear they could trust. A good thing we recently asked them directly – and it shows that we are on the right path.

INNOVATION BECAME OUR WAY FORWARD.

This listening approach is why we were the first in the world to design lifejackets with a true female fit – proving that safety should adapt to the person, not the other way around. We also pioneered vests made from recycled materials, showing that sustainability and security can go hand in hand. And with every new design, every detail, we've stayed true to one belief: there is a perfect vest for every activity on the water. And we never compromise with the personal safety.

NOW IT'S TIME FOR THE NEXT STEP.

Baltic is ready to be your strongest partner in retail. With smart activations through season, we help you plan, drive traffic and sell through, so more people discover the feeling that sets Baltic apart. Because safety isn't something you should notice. It should simply be there, quiet, steady, reliable. In the background as the water parts beneath you, as the wind rises, as the day winds down. That's the feeling of comfortable safety. That's Baltic.

BRANDING & MARKETING

For the upcoming season, our marketing initiatives are set to shine a spotlight on the feel of comfortable safety – the foundation behind every Baltic Lifejacket.

Within this spread, you'll discover our marketing plan and the key focus areas that define our innovation and communication. Our goal is to strengthen awareness around our unique product categories while delivering engaging campaigns and digital content that highlight comfort, safety, and sustainability.

We will support your sales efforts with an extensive selection of marketing and POS materials, complemented by images, videos, and stories that bring the feel of comfortable safety to life across all channels.

STORYLINE 2026 - THE FEEL OF COMFORTABLE SAFETY

Safety should never be complicated. It should simply be there reliable, present, and easy to trust. That is the foundation of every Baltic lifejacket. It means confidence for parents when children are on board. It means peace of mind when sailing offshore, or when relaxing close to shore. And it means knowing the equipment will perform, no matter the conditions.

At Baltic, we combine decades of innovation with strict testing and timeless creative design. The result is lifejackets and buoyancy aids that adapt to the person, the activity, and the moment, without ever compromising safety and comfort.

That's the feel of comfortable safety.

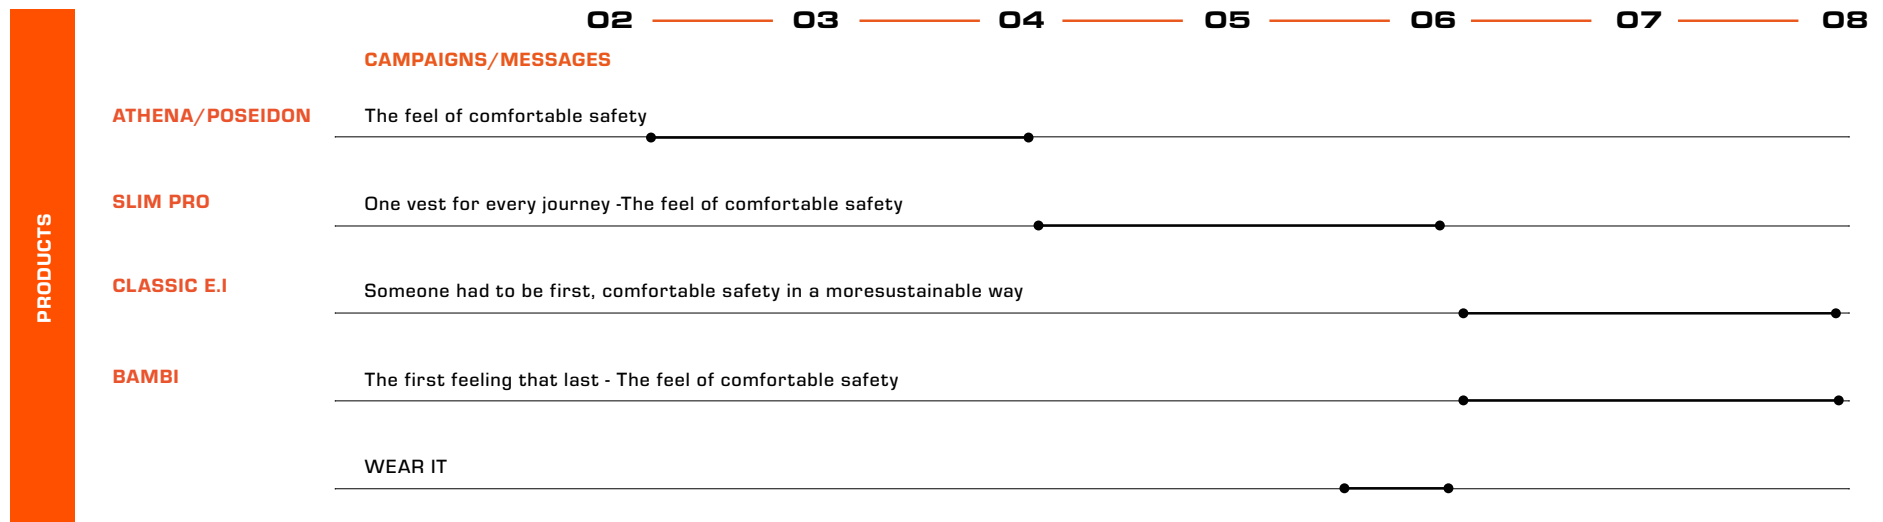

MARKETING PLAN 2026

The good feel of comfortable safety | Our inflatable lifejackets are tailored for the unique needs of women and men. Designed with ergonomic fits, lightweight materials, and stylish details, they provide uncompromised safety without sacrificing comfort or freedom of movement.

Someone had to be first – comfortable safety in a more sustainable way | We lead the way in sustainability by introducing lifejackets crafted from recycled fabrics and components. This innovation combines trusted safety with environmental responsibility, proving that safety can also be sustainable. of movement.

One vest for every journey – the feel of comfortable safety | Whether it's sailing, kayaking, fishing, or exploring the archipelago, Baltic offers lifejackets designed for every adventure. Each model is fine-tuned to its purpose, ensuring maximum comfort and safety tailored to your activity.

The first feeling that lasts – the feel of comfortable safety | For the youngest adventurers, comfort and safety go hand in hand. Our children's lifejackets are designed to provide security from the very first moment on the water, creating trust and a safe feeling that lasts a lifetime.

ENVIRONMENTAL INITIATIVE

Our sustainability journey is ongoing, across many aspects of Baltic's business operations. It is in our vision to always be at the forefront of product design and development, and this applies to our sustainability work. We believe that transparency is very important, so our customers get a deeper understanding of us and why we make the choices we do. We are passionate about the experiences people have on rivers, seas and oceans and we are particularly keen that what we do as a business limits the impact we have on the environment. Sustainability and safety must go hand in hand so that we can continue to feel safe when we are out enjoying nature.

The Lifejackets and buoyancy aids made of recycled materials mean 23–24 % less carbon dioxide emissions compared to traditional Lifejackets made from non-recycled material.

The materials are carefully selected, without compromising in the least on quality and safety. The polyester fabric is made from recycled PET bottles and the floating material is Polyethylene, recycled from industrial waste. The buckles and straps will continue to be made from non-recycled material as there is no certified alternative to these components at the moment. Baltic's long-term goal is that these Lifejackets should contain 100 % recycled material when the necessary certifications are in place, always without compromising your personal safety.

100% RECYCLED MATERIALS

The Baltic E.I. Range is made from 100% recycled materials where standards allow to produce new high quality lifesaving products with no compromise on your safety. 24% less carbon dioxide is emitted during the Baltic E.I. manufacturing process than when using non-recycled materials.

By those choices we reduce our impact on environment with

24%

LESS CO2 EMISSIONS

FABRICS AND FLOTATION MATERIAL

The materials are carefully selected, without compromising on our quality and safety. The polyester fabric is made from recycled PET bottles and the buoyant material is polyethylene, recycled from industrial waste. The buckles and straps will continue to be made from non-recycled material as currently there is no certified alternative to these components.

We never compromise with your personal safety.

IT TAKES

10

...600ml recycled PET bottles to make one buoyancy aid with the inner and outer polyester fabric.

EPIQ E.I. 165 AUTO

We are expanding the E.I. collection with a new inflatable Lifejacket, the Epiq 165. With a sporty look and feel, this comfortable vest comes with a mesh lining in the neck and it's a lightweight jacket. The outer fabric is made from recycled material.

HERA E.I. BUOYANCY AID

Introducing the Hera E.I. to the collection. Hera E.I. is a 50N buoyancy aid for active females on the water. The wider chest section makes it comfortable, particularly for women with a larger bust size who previously have had trouble finding buoyancy aids that fit well and is comfortable. The Hera E.I.. is a sporty design with a slim fit.

INFLATABLE LIFEJACKETS

Inflatable Lifejackets are among the safest product to use when you are out on the water as long as you maintain and care for them correctly. Inflatable Lifejackets function using a CO₂ cylinder that must be replaced each time the Lifejacket has been inflated. The cylinder has no specific expiry date but it should be checked regularly ensuring that it has not been pierced or corroded and is screwed in tightly. The automatic Lifejacket has a sensor once fully immersed it activates and inflates the Lifejacket. The sensor should also be checked that it is within the expiry date and screwed on tightly. All inflatable Lifejackets both Manual and Automatic models have a manual pull cord.

An inflatable Lifejacket must always be the outermost garment, this is to ensure the Lifejacket is not constrained from inflating and that water can activate the sensor. It is important to adjust the waistband so that the Lifejacket fits correctly to the body. A poorly adjusted Lifejacket tends to transfer the weight onto the collar, whereas a well-adjusted Lifejacket can be worn all day without any discomfort to the shoulders and neck. Our most popular model of inflation mechanism is automatic, it ensures that the vest inflates by itself when you fall into the water.

Manual inflation Lifejackets tend to be used by among others, anglers who stand in flowing water, regatta sailors and rescue personnel who are swimmers, who sometimes require entry into the water without buoyancy.

THE WAY TO COMFORTABLE SAFETY

FIND THE RIGHT INFLATABLE LIFEJACKET

Choosing the right inflatable Lifejacket is all about matching comfort, safety, and activity. Whether you're sailing offshore, cruising along the coast, or heading out in a motorboat, Baltic has designed a jacket that fits the moment. Use the guide below to see which model is right for your customers – and give them the confidence to enjoy every trip on the water.

01 **Feel the Fit** | The jacket should sit comfortably around the neck, without rubbing or pressure, and move naturally with your body as you turn, bend, or lean on board.

02 **Harness or Not** | Decide if your adventure requires an integrated safety harness. Offshore sailing often demands it, while relaxed cruising or powerboating may not. Match the vest to the activity.

03 **Choose the Shape** | Lifejackets come in different cuts for different needs. Some are tailored for the female form, others for broader shoulders. Find out if soft mesh or fleece in the neck may add comfort.

HOW AN INFLATABLE LIFEJACKET WORKS

The inflatable Lifejacket has a CO₂ cylinder connected via an inflation valve fitted to an airtight lung. This valve is either automatic or manually activated. To inflate the Lifejacket manually you must pull the inflation cord located on the right hand side. The inflation starts immediately. An automatic inflatable Lifejacket is inflated with CO₂ gas either manually by pulling the cord or automatically within three seconds upon immersion.

All Lifejackets are equipped with a mouth inflation/deflation tube. After inflation to expel the air from the inflatable lung, invert the mouth inflation tube cap, depress the valve and gently squeeze. The gas in the cylinders is carbon dioxide, do not inhale.

N.B! When the Lifejacket has been inflated it must be rearmed. Inside your Lifejacket you can find information on which spare parts to use. Instructions on how to rearm your Lifejacket can be found in the rearming kit or on our homepage www.baltic.se.

■ We recommend that you always have at hand
■ spare cylinders and cartridge/capsule (if automatic) for your inflatable Lifejackets. Information about required spare parts can be found by the inflation valve.

An inflatable Lifejacket must be checked before each use, and serviced once every year.

1.

2.

3.

4.

HAMMAR VALVE

Hammar MA1 is an automatic inflation valve with an hydrostatic activation trigger. This means that it automatically activates at a water depth of about 10 cm and quickly fills the inflatable Lifejacket with CO₂ gas.

Thanks to this unique function, the Lifejacket is only inflated once the person is in the water and in need of the extra carrying capacity.

WITH OR WITHOUT SAFETY HARNESS

Most of our models are available with or without integrated safety harness. The safety harness is used to attach a safety line to the Lifejacket to help prevent falling overboard. Onboard a motorboat or for sport fishing, we recommend a model without safety harness, as the Lifejacket is lighter and easier to adjust.

However for safety onboard a sailboat especially when moving around on deck in a seaway it would be beneficial to attach a safety line to the Lifejacket. All our Lifejackets and safety harnesses are CE marked and approved in accordance with EN / ISO 12402/12401.

GAS CYLINDER RETAINER

- All Baltic inflatable Lifejackets are
- fitted with a cylinder retainer to prevent the cylinder from working loose.

SLA

SLA models (those equipped with a sprayhood, emergency light and AIS mount) are approved for international yacht sailing in accordance with World Sailing OSR regulations.

FORCE 190 HARNESS

Lifejacket specially designed for challenging yacht racing conditions. Due to the ergonomic fit this Lifejacket is comfortable to wear even during longer periods of time. Integrated safety harness with twin loops for attaching the safety line. Detachable crutch strap. Buoyancy 190N.

BUOYANCY AIDS 50N ACTIVE & ALLROUND

Buoyancy aids that are approved according to the 50N standard provide enough buoyancy to keep the wearer afloat with a good margin. They are suitable for swimmers weighing at least 25 kg and are appropriate for most activities in, on, and by the water.

When choosing a buoyancy aid, it's important to consider both fit and activity. A buoyancy aid that fits properly and doesn't ride up is more important than exactly matching the weight range indicated on the label. A good fit makes the aid more comfortable and easier to swim in.

We have divided our 50N buoyancy aids into two categories:

ACTIVE: Vests for competitive sailing, paddling, and water sports.

ALLROUND: Vests for general use and various occasions.

Common to all our 50N buoyancy aids is that they are made from approved, quick-drying materials and feature a well-thought-out design.

THE WAY TO COMFORTABLE SAFETY

FIND THE RIGHT BUOYANCY AID

Now let's take a closer look at how to match the activity with the buoyancy aid that fits best. Whether it's high-performance *Active* models for sailing and watersports, or versatile *Allround* vests for everyday use, the goal is the same: comfort, safety, and freedom on the water. Use the guide below to find the right model – and make sure the choice feels natural from the first try-on.

Check the Fit | The buoyancy aid should feel balanced on the body – comfortable to wear, supportive without pressure, and allowing natural movement. It must not ride up when swimming or moving. Also, test with different clothing layers to ensure comfort and safety.

Match the Activity | Active models are designed – often slightly shorter, with a tighter fit for greater freedom of movement – for sailing, paddling, and watersports. Allround models work best for general boating and everyday fun. Select the model based on how it will be used.

Prioritize Comfort | Balance comfort with activity and body shape. Active buoyancy aids are shorter and tighter in fit, allowing easier movement, while an Allround vest may sometimes sit better. Try both and find what feels right for your body.

LIFEJACKETS 100N

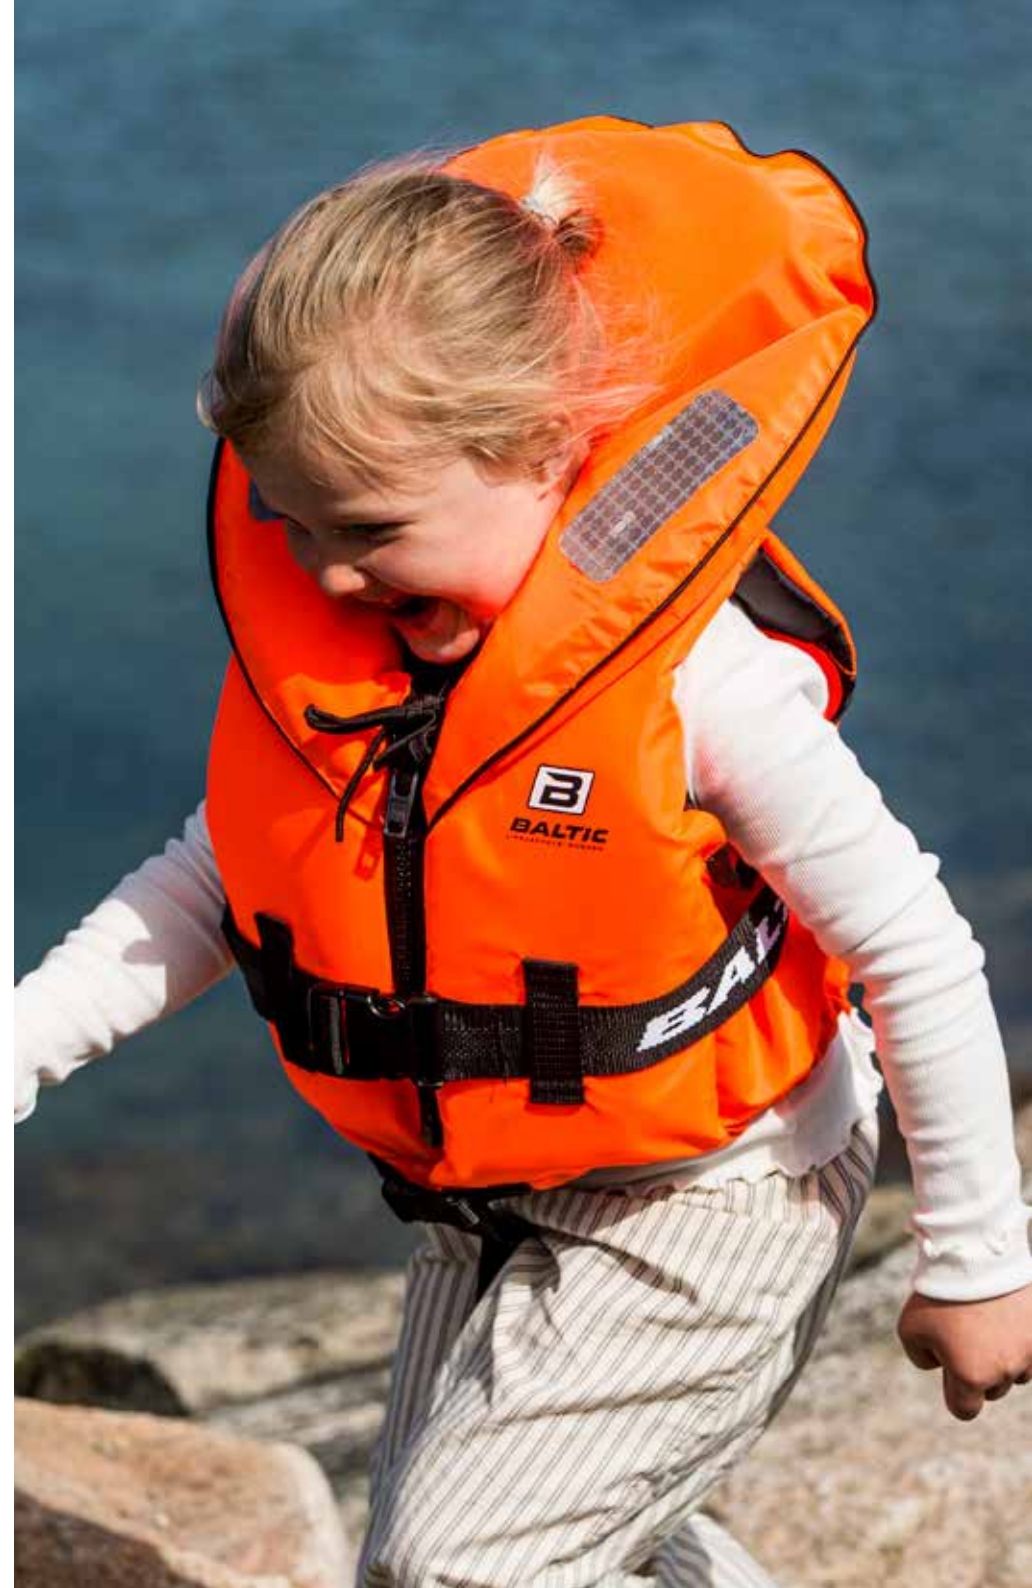

A Lifejacket is designed to keep the wearer's airways above the water surface by turning the person face up and supporting the head. This makes the Lifejacket the obvious choice for individuals who cannot swim.

Lifejackets are constructed with more buoyancy at the front and less at the back, which helps turn the wearer onto their back. The collar of the jacket lifts the head to keep the airways above the water, but it does not affect the actual turning.

All approved Lifejackets are tested according to the 100N standard and come with essential features such as a whistle, retro-reflective patches, a crotch strap, and high-visibility materials for increased safety.

For the smallest children, there is a model with an integrated safety harness, tested according to EN ISO 12401. It has stainless steel D-rings for attaching a safety line and a crotch strap with two adjustment positions for the best fit. Jackets with split buoyancy panels conform better to the body and allow easier movement.

A Lifejacket is the best choice for small children at sea.

THE WAY TO COMFORTABLE SAFETY

FIND THE RIGHT 100N LIFEJACKET

Baltic's 100N Lifejackets are designed to keep the wearer's airways safely above the water by turning the person face up and supporting the head. This makes them the natural choice for children at sea, for non-swimmers, or for anyone who needs extra security in challenging waters. All Baltic Lifejackets are tested according to the 100N standard and include essential safety features such as a whistle, retro-reflective patches, a crotch strap, and high-visibility materials.

01 Check the Size | Always choose the correct size, not one to "grow into." A proper fit is vital for safety and comfort, since Lifejackets are built to support the head and turn the wearer face up in the water.

02 Focus on Comfort | Select a Lifejacket that feels good to wear. Split buoyancy panels adapt better to the body and allow for easier movement, while a divided collar makes the jacket more comfortable for children – and less restrictive for adults during long days on the water.

03 Make it Positive | Safety works best when children want to wear the jacket. Let them choose their favorite color to make it a positive experience. A Lifejacket they helped select will feel like part of the adventure – and give parents peace of mind.

BAMBI LIFEJACKET

Bambi is designed for new born babies up to the weight of 12 kg. The Bambi helps the child into a safe back position. Extra soft material throughout the vest. Fleece-lined neck. Fitted with whistle, retro reflective patches and two position crotch strap.

FLOTATION CLOTHES & FLOTATION SUITS

With stylish and practical flotation clothing, you don't need to change when you go ashore. At sea, they serve the same function as a regular flotation aid, maintaining safety. When ashore, they work as practical vests or jackets. So, you get two functions in one garment. The jackets and vests are approved according to the 50N standard, which means they keep you afloat with a good margin, but they won't help with turning or keeping your head above water. Therefore, you need to be able to swim to use these products.

AMAROK JR FLOTATION SUIT

Soft and comfortable floatation suit. Fully waterproof with taped seams. Four outer pockets and two fleece-lined outside pockets. Internal braces. Approved according to the same standard as a buoyancy aid. Remains soft and comfortable to wear at very low temperatures. Buoyancy: 80N.

FEATURES:

-  BUOYANCY 80 NEWTON
-  THERMAL PROTECTION
-  SIZES 25KG AND UP
-  2 YEAR GUARANTEE

SIZE:

DOG & CAT BUOYANCY AIDS

Our four-legged friends are part of the family and have the same need for maximum safety as those with two legs. Buoyancy aids for dogs and buoyancy aids for cats should not only withstand tough conditions but also come in exactly the right size and provide the right flotation so that your dog or cat can move comfortably and feel good.

Our buoyancy aids for dogs and cats have the same uncompromising attention to detail as those for their owners, with many thoughtful features built in. Carefully designed insulation ensures that your pet never gets too cold or too warm. Our buoyancy aids for dogs and cats may include handy quick-release fastenings, reflectors, smart carrying handles, and D-rings for leads, to name just a few examples. Quality buoyancy aids for dogs and cats make life on board calmer and safer not just for your four-legged friend, but for the whole family.

MAJA CAT BUOYANCY AID

The Maja pet buoyancy aid has been developed specifically for cats. With a smaller neck opening and an extra under strap the Maja fits a cat perfectly. The buoyancy aid also has a retro reflective patch at the lifting handle and a D-ring for attaching a leash. This buoyancy aid is manufactured using a durable high visibility fabric.
